

Car education

When you start your education, you must plan and set aside time for what you will do.

The education consists of theory and driving education. The teaching material is adapted to most traffic schools' educational plans. The content of the education is governed by the syllabus compiled by the Swedish Transport Agency.

A good way to do this is to study theory concerning practice driving. Then, you have more significant opportunities to understand the traffic rules.

Generally

Unless otherwise stated, the questions and the text you read apply to Swedish conditions and the qualifications for which you are training.

Manual or automatic shifting

A driving license for a car can be obtained for automatic transmission only or for both manual and automatic transmission.

If you take a driving license only for automatic transmission, your driving license is limited, and you may not drive a car with a manual transmission. The teaching aid is adapted for both variants.

The parts that address shifting and related topics describe how the gearboxes are used with a division into Manual shifting and Automatic shifting. The parts about manual shifting (a few) are marked with Manual shift only. These parts are not necessary for those with limited driving licenses. However, it is good to read these parts as well, as they understand how other drivers' situations are when, for example, they have to start downhill. For those of you with a driving license that is not limited, everything must be read as your driving license gives you the right to drive an automatic gearbox.

Electric cars

There are many indications that the future will be increasingly electrified. Electric cars do not traditionally have a gearbox, so for simplicity, we classify them as Automatic gears.

The importance of learning

Imitation learning

Taking note of other road users' behavior is called imitation learning, this happens subconsciously and can be both positive and negative.

The positive is that you learn, among other things, by mimicking others. Therefore, it is often good for your teacher to demonstrate an exercise for you.

The negative is that you often imitate subconsciously. You should therefore have a critical attitude towards the behavior of others. In traffic, it is only you who are responsible, you cannot blame anyone else. Make your own assessment. If you are unsure, ask your teacher.

Probability learning

Probability learning means that you unconsciously adjust your behavior. You have to be aware that the learning of probability can affect you both positively and negatively.

Positively

Imagine that every day you drive past a bus stop where there are always stressed people. You are therefore well aware that someone may run out in front of or behind the bus. In this case, you have been positively affected.

Negative

Imagine that you drive to your workplace every day and pass an intersection where there is rarely any traffic. The risk is then that you adapt your behavior and do not look as carefully as you should. In this case, you have been adversely affected.

Overlearning

Overlearning means that something is practiced so much that you remember it very well and it largely happens automatically. A common description is that "it's in your spinal cord". In traffic, for example, this can apply to how you shift gears or brake. When you have practiced a lot, it is not something you need to focus on when driving.

By overlearning certain parts of your driving, you can more easily manage to drive safely even if you are stressed. In a complicated traffic situation, you can focus on important parts such as observation and risk assessment, while other parts of your driving are more automatic.

Repetition

The key to a thorough learning process is often to repeat. Therefore, try to repeat what you learn during your training.

Deep learning means gaining a deeper understanding and learning reasons and contexts within a certain subject. For example, you don't just learn that you should drive 30 km/h past a school because it says so on a sign, but why you should drive 30 km/h.

That which you think is fun is easier to learn. We often learn more when they are interested. You get deep learning at the same time and understand context better.

As for your drivers license there is much you must learn. It is simple to make it easy for yourself and learn a lot without really understanding it.

It is best if you can really understand why things are as they are. When you understand the contexts, and you can handle most problems in a better way.

When you are interested while you study, you get a license for less money, get better results on your driving test and get less problems in traffic. You also get better knowledge

Superficial learning

The word superficial learning really says what it's about. When you have learned something superficial, you do not have in depth knowledge. You may have studied to pass a test? You will forget this knowledge very quickly, meaning that when you need the knowledge it is gone.

Superficial learning reduces your ability to automatically react in stressful situations.

Superficial learning may mean that you do not follow the rules because you do not understand or realize the risks of your behavior.

Tip! Try to understand what you learn, then the chance that you will remember will increase. Then you also increases your chances of passing your driving test, where you likely are a bit nervous.

The history of car traffic

The development of the car, as early as the end of the 18th century, they began to experiment with steam-powered wagons. However, it did not take off until the end of the 19th century. Then a number of manufacturers started selling cars on a slightly larger scale. Initially, steam-powered cars were sold as well as cars with internal combustion engines and electric motors. In the early 1900s, in, for example, the United States, both steam-powered cars and cars with electric motors were more popular than cars with gasoline-powered internal combustion engines.

Around 1900, German Benz was the largest manufacturer with around 500 cars a year. Development then progressed quickly. In the early 20th century cars with internal combustion engines started to get mass-produced on assembly lines and soon completely took over production around the world. In 1915, Ford was the largest with a production of over 500,000 cars a year with an internal combustion engine and the electric car began to disappear completely all over the world.

In the beginning, there were hardly any rules at all on how you should drive a car, and they were not in great need since there was about one car per thousand inhabitants. A few years into the 20th century, the number of cars increased, and thus other needs for regulations and driver's license regulations increased. In the middle of the 20th century, around 1950, there was one car per ten inhabitants in Sweden. In 2018, there were over 4.8 million cars, which means that there is almost one car per two inhabitants.

The development of traffic safety

As early as 1861 Britain introduced speed limits. The speed was limited to 16 km/h for the large steam powered tractors that existed at that time. But the speed was soon reduced to 6 km/h in the countryside and 3 km/h in the city.

The driver's license came in 1907 to Sweden. Then the requirements were low. Today, driving license training, after many years of road safety work, has developed and is today more about risks and behaviors than about vehicle knowledge.

In 1930, pedestrian crossings started becoming commonplace.

At the end of the 1950s, about 1,000 people died annually in Swedish traffic. The large number of people killed in traffic increased the demand for safer cars and safety equipment.

In 1959, seat belts began to become standard with Volvo PV and Volvo Amazon.

In the 1970s, car manufacturers began to introduce airbags. Today this is the standard for all new cars. An airbag in combination with a seat belt and belt tensioner can reduce the risk of injury by 60-70%.

The roads are also changing. More highways are being built, wider roads and something called "mid barrier roads". These are roads with wire rails, where single- and two-branched sections intersect. This means that when you overtake another vehicle you have no oncoming traffic.

Today, the annual number of deaths is approximately one fifth (approximately 200) of the number of deaths in the 1950s (approximately 1,000)

The Future

Roads

Roads with associated infrastructure continue to be developed to make it safer in traffic. A lot of roundabouts are built as there are few fatalities at these sites.

Vehicles

The vehicles continue to evolve. Much research is underway and several experiments are already underway with self-driving vehicles. Already today, many new cars have elements of technology that slow down if there is any obstacle in front of the car, warn if there is traffic alongside the car, warn if you are reversing into any obstacle, etc. The technology is there to help you as a driver.

Transports

The transports are changing. More self-driving trucks that, for example, drive close to each other in a convoy where the distances between the trucks are adjusted automatically, which reduces the risk of collisions.

Number of cars

In cities, there are, already now, too many cars. The environment is destroyed and there are long queues. If the number of cars is constantly increasing, this problem will increase. It is therefore very much hoped for better public transport as well as more technology for driverless taxis that never go empty etc. This would significantly reduce the amount of traffic in the cities.

Fuel

Fossil-based fuels are being phased out more and more and more vehicles are likely to be powered by some form of electricity.

Automatic transmission

Cars will have automatic transmission to an increasing extent.

Vision Zero

National target

The Riksdag has set a national target called the Vision Zero. This is the basis for road safety work in Sweden. The decision has led to changes in the way traffic safety works.

- Vision Zero is the image of a future where people are not killed or harmed for life in road traffic.
- Vision Zero is an ethical approach, but also represents a strategy for shaping a safe road transport system.
- Roads, streets and vehicles must be adapted and designed according to human conditions.
- The perfect human does not exist. The Vision Zero accepts that accidents do occur, but not that it leads to serious injury.

Agencies and road safety organizations

Agencies

- **The Swedish Transport Administration is responsible for long-term planning of the transport system for all types of traffic as well as for the construction, operation and maintenance of state roads and railways. The Swedish Transport Administration is also responsible, among other things, for conducting knowledge tests and driving tests for driver's licenses and taxi driver identification.**
- **The Swedish Transport Agency formulates rules and controls how they are complied with, gives permits (driver's licenses and certificates), registers ownership changes and handles congestion tax and vehicle tax.**

Examples of road safety organizations

- **VTI - Swedish National Road and Transport Research Institute**
- **NTF - The National Society for Road Safety**
- **MHF - Motor Drivers' Whole Soberness Association**
- **SMC - Sweden's Motorcyclists**

- **Älgskadefondsföreningen - The Moose Injury Fund Association**

MHF - <http://www.mhf.se/>

NTF - <http://www.ntf.se/>

SMC - <https://www.svmc.se/>

Trafikverket, körkort - <https://www.trafikverket.se/korkort/>

Transportstyrelsen, vägtrafik - <https://www.transportstyrelsen.se/sv/vagtrafik/>

VTI - <http://www.vti.se/>

Älgskadefondsföreningen - <https://www.algen.se/>

Collisions and humans

It is important that you understand that speed is the major cause of fatal and severe injuries in traffic accidents.

There are scientifically established limit values for which speeds the human body can handle. The values are based on the current design of cars and roads, and require that all occupants use seat belts.

Research on the so-called collision curve (2012) shows, among other things::

- Most pedestrians survive if they are hit by a car traveling at 30 km/h.
- Most pedestrians are killed if they are hit by a car traveling at 50 km/h.
- To counteract death and serious injury cases crash speed between cars and pedestrians should not exceed 30 km/h.

The research has influenced how many local authorities decide on the 30 km/h as maximum speed where there are children and vulnerable road users.

Keep the speed at pedestrian crossings

Statistics show that most accidents between pedestrians and motor vehicles occur when the pedestrian tries to cross the street.

Most die outside densely populated areas

Of the 210 who died in 2021, a majority (75 percent) died in accidents outside densely built-up areas.

Driver license and driver certificate

The vast majority of vehicles require a driver's license or driver's certificate (förarbevis). Your teaching material contains general information needed in your education.

The Swedish Transport Agency's and the Swedish Transport Administration's websites contain information on all types of vehicles, transitional rules, temporary regulations and more.

Category AM license

Driving age 15 years

Gives the right to drive

- Moped Class I (EU moped) - Designed for a maximum speed of 45 km/h
- Moped car (classified as moped class I)
- A trailer with a width not exceeding 125 centimeters and with a weight not exceeding half the service weight of the towing vehicle less the weight of fuel and tools belonging to the vehicle

Category AM license also gives you the right to drive

- Moped Class II - Designed for a maximum speed of 25km/h
- EPS-tractor/A-tractor (older regulations for tractors) - Limited to a maximum speed of 30 km/h
- Tractor a - Designed for a maximum speed of 40km/h
- Class II motor gear - Designed for a maximum speed of 30 km/h

Category A license

Three different permissions

There are three different driving license categories for motorcycles: A1, A2 and A. The difference lies in how powerful motorcycles you get to drive.

Below you can see what is usually called "step by step access" to more qualified vehicles:

- A1 driver's license age 16 years, maximum power 11 kW ("light")

- A2 driver's license age 18 years, maximum power 35 kW ("medium")
- A driver's license age 24 years (20 years at 2 years holding A2), unlimited power ("heavy")

Special rules for four-wheel motorcycles

Driving licenses with category A1, A2 and A issued after 19 January 2013 do not apply to four-wheel motorcycles. For this, category B is required. If you have a category A driver's license issued before January 19, 2013, you can also continue to drive four-wheeled motorcycles.

Special rules for tricycles

Driving licenses with the permits A1 or A2 give the right to drive three-wheel motorcycles with a net power of not more than 15 kW. To drive tricycles with more than 15 kW net power, a driver's license with A or B is required and the license holder must be 21 years of age or older.

Net power

The net power is determined by the engine manufacturer using a complete engine in a test bench without a drivetrain. The net effect is stated in the registration certificate.

Category B licenses

Category B license includes the right to drive a passenger car or light truck with a total weight of no more than 3.5 tonnes.

Three different permissions

There are three types of category B licenses: B, B extended and, BE. The difference in these variants lies in the trailers you are allowed to pull.

The following requirements apply for obtaining B-qualifications:

- You have a valid driver's license
- You are permanently resident in Sweden or have studied here for at least six months
- You have turned 18 years
- You have undergone risk education part I and part II and both are valid
- You have passed an approved driver test (knowledge test and driving test)

- You do not have a driver's license issued in any other state within the EEA

The following applies to trailers for B permits:

- With standard B-permission you are allowed to drive a light trailer
- The trailer is considered light if the total weight of the trailer does not exceed 750 kg
- A trailer weighing more than 750 kg is also considered light as long as the combined total weight of the trailer and car is no more than 3,500 kg.

Terms Automatic transmission

It is also possible to obtain a driving license with conditions regarding limitations to an automatic transmission car (condition code 78). You can later lift the condition for an automatic transmission car by completing an approved driving test for a manually shifted car.

Category C licenses

If you are driving a heavy truck or a heavy truck with a trailer, you must have a C in your driver's license.

There are many rules when you get to practice driving, which vehicles you should have at the driving exam, etc. Complete information can be found at the Swedish Transport Agency.

Category C license

Driving age 21 years (or 18 years with completed training to drive goods transport).

Gives the right to drive

- Heavy truck and passenger cars with no weight limit. You may also tow a trailer with a total weight of not more than 750 kg

Category C1 license

Driving age 18 years

Gives the right to drive

Heavy truck with a total weight not exceeding 7.5 tonnes and a passenger car with a total weight exceeding 3.5 tonnes but not exceeding 7.5 tonnes. You may also tow a trailer with a total weight of not more than 750 kg

Category C1E license

Driving age 18 years

Gives the right to drive

- Car covered by license C1 or B. You may also tow one or more trailers if the total weight of the car and trailers is not higher than 12,000 kg

Category CE license

Driving age 21 years

Gives the right to drive

- Car covered by license C. You are also allowed to tow one or more trailers without a weight limit

Category D licenses

Category D license

Driving license age 24 years

Gives the right to drive

- Bus regardless of number of seats and length. You can also tow a trailer with a total weight of not more than 750 kg

Category D1 license

Driving age 21

Gives the right to drive

- Bus made for a maximum of 16 passengers in addition to the driver and with a length not exceeding 8 meters. You can also tow a trailer with a total weight of not more than 750 kg.

Category D1E license

Driving age 21 years

Gives the right to drive

- Bus covered by D1 license. You may also pull one or more trailers without a weight limit

Category DE license

Driving license age 24 years

Gives the right to drive

- Bus covered by category D.
- Bus covered by category D with one or more trailers.

Tractor license

If you are going to drive a Class II tractor or motorized equipment (designed for a maximum speed of 30 km/h) on the road, you will need a tractor license or driver's license.

However, you can drive shorter distances on the road without a tractor or driver's license, if you drive to or from a workplace, between a farm's property or the like.

In order to get a tractor license you must be 16 years old. If there are special reasons, you can get a tractor license at the age of 15. Then you need age dispensary from the Swedish Transport Agency.

Tractor a

- It is designed for a maximum speed of 40 km/h. It must be equipped with a sign indicating that it is a slow-moving vehicle (LGF sign), see picture below.

- It requires a tractor license, a driver's license with an AM category or higher. For short distances on the road, to or from a workplace on a farm's property or similar,

no driving license is required for tractors a. These driving rules also apply to older tractors, see below.

- It should be driven on the hard shoulder or as far right as possible on the roadway.

Older tractors

Older tractors (before 2003) and cars converted to tractors (A-tractors) are seen as tractors a and should be limited to a maximum speed of 30 km/h.

Tractor b

- It is designed for a speed exceeding 40 km/h and may be driven at a maximum speed of 50 km/h.
- It requires a minimum B driver's license.
- It should be driven on the roadway (road).

Driver certificate Moped Class II

The driver certificate (förrarbevis) gives you the right to drive a Class II moped ie. a moped that is designed for a speed of 25 km/h and has an engine whose power does not exceed 1 kilowatt.

A Class II moped is designed for a maximum speed of 25 km/h. The engine power must not exceed one kilowatt. Driving a Class II moped requires a driver's permit (förrarbevis). There is an exception; if you turned 15 years before October 1, 2009, no driver's permit is required.

A Class II moped is an **unregistered vehicle** but it must be at least traffic insured. An insurance certificate must be carried while driving.

Older mopeds designed for a speed of no more than 30 km/h are seen as Class II mopeds. This type of moped may not be sold in Sweden today.

To obtain a driver's permit, contact an approved trainer. The training includes theory and practice as well as a knowledge test. The practice is voluntary and may be replaced by theory lessons. Approved trainers can be found via the Swedish Transport Agency.

When purchasing a Class II moped, you must request a type certificate (typintyg) if it is a Swedish approved 30-moped or a CoC certificate (certificate of conformity) if it is an EU approved 25 moped.

Traffic rules

The traffic rules for moped class II are the same as for bicycles. You should therefore drive your Class II moped on a bike lane, unless the bike lane has an additional sign under the road sign for the mandatory cycle path where it says "not moped" (Ej moped).

Driver's certificate snowmobile

If you are going to drive a snowmobile, you need a special driver's license.

Exception

If you obtained a driver's license or tractor license before January 1, 2000, you have the right to drive a snowmobile with it.

Driver's certificate ATV

If you are going to ride an ATV you will need a special driver's certificate.

You may also drive ATVs if you have a driving license or tractor license issued before January 1, 2000.

Summarized driver's license and certificate table below -

Category / Subgroup	Min. Age	Vehicles Covered	Permitted Trailer(s)	Notes & Special Rules
Driver's Certificate (Förarbevis)				
– Moped Class II	15	Moped Class II (≤25 km/h, ≤1 kW, unregistered)	None	Not needed if born before 1 Oct 2009

Category / Subgroup	Min. Age	Vehicles Covered	Permitted Trailer(s)	Notes & Special Rules
– Snowmobile	16	Snowmobile	None	Not needed if license/tractor license before 1 Jan 2000
– ATV	16	ATV	None	Not needed if license/tractor license before 1 Jan 2000
AM License	15	Moped Class I (≤ 45 km/h), Moped car (class I), Moped Class II, EPS-tractor/A-tractor (old, 30 km/h), Tractor a (≤ 40 km/h), Class II motor gear	Trailer ≤ 125 cm width & $\leq \frac{1}{2}$ towing vehicle's weight	
Category A License		Motorcycles, Tricycles	None specified	See subcategories and special rules
– A1	16	Motorcycle ≤ 11 kW (“light”), Tricycle ≤ 15 kW	None specified	Not for quad motorcycles after 19 Jan 2013
– A2	18	Motorcycle ≤ 35 kW (“medium”), Tricycle ≤ 15 kW	None specified	Not for quad motorcycles after 19 Jan 2013
– A	24 (20*)	Motorcycle unlimited (“heavy”), Tricycle (any power, ≥ 21 yrs), Tricycle ≤ 15 kW	None specified	20 yrs with 2 yrs A2; pre-19 Jan 2013 covers quad motorcycles
Category B License	18	Passenger car/light truck (≤ 3.5 t), Tractor b	Trailer ≤ 750 kg, or if > 750 kg, total $\leq 3,500$ kg	Subcategories (B, B extended, BE) differ in trailer weight;

Category / Subgroup	Min. Age	Vehicles Covered	Permitted Trailer(s)	Notes & Special Rules
				automatic restriction possible
Category C License		Heavy truck, Passenger car	See subcategories	
- C1	18	Heavy truck ≤7.5 t, Car >3.5 ≤7.5 t	Trailer ≤750 kg	
- C	21 (18*)	Heavy truck/Passenger car (no weight limit)	Trailer ≤750 kg	18 w/ goods transport training
- C1E	18	C1 or B vehicles	Trailer(s) for total vehicle+trailer ≤12,000 kg	
- CE	21	C vehicles	Trailer(s) no weight limit	
Category D License		Bus	See subcategories	
- D1	21	Bus ≤16 passengers + driver, ≤8 m	Trailer ≤750 kg	
- D	24	Bus (any size/length)	Trailer ≤750 kg	
- D1E	21	D1 buses	Any number of trailers, no limit	
- DE	24	D buses	Any number of trailers, no limit	
Tractor License	16 (15*)	Tractor a/Class II tractor (≤40 km/h), Motorized equipment (≤30 km/h)	Not specified	15 with special permission; not needed for short distances farm/worksite

*** Age 20 for A if holding A2 for 2 years; Age 18 for C if goods transport training complete; Age 15 for Tractor License possible with special permission.**

Driving License Regulations

All rules regarding driving licenses are found in the Driving License Act. Regulations for application can be found in the Driving License Ordinance.

Source for the information below : https://www.riksdagen.se/sv/dokument-lagar/dokument/svensk-forfattningssamling/korkortsforordning-1998980_sfs-1998-980

https://www.riksdagen.se/sv/dokument-lagar/dokument/svensk-forfattningssamling/korkortslag-1998488_sfs-1998-488

Driving license requirements

All driving licenses give the right to drive mopeds, tractors and, power tools class II. You also get the right to drive with a connected light trailer.

The driving license must be carried when traveling

It is a requirement to have a driving license with you when driving. However, if you do not have this, you will avoid a fine if you have an approved ID document with you.

Please note that you do not need to bring any other documents with you, such as a registration certificate or insurance certificate.

Exception

- Moped class II requires a driver's license - you may drive immediately when your approved knowledge test has been registered with the authority if you have a valid ID with you when you drive. After two months, you must bring your driving license with you when you drive.
- Snowmobiles and ATVs require a driver's license.
- Taxis require taxi driver identification.

Terms Automatic transmission

A driving license with conditions regarding limitation to automatic transmission car (condition code 78) means that the driver may only drive a car with automatic transmission.

Probation period

For most driving license authorizations, a probationary period of two years applies from the day of the driving test. For those who take a driver's license for AM (moped class I) from 1 June 2024, a probationary period of one year applies. There has previously been no probationary period for AM.

Probation period

A probationary period means that if, during this period, you are guilty of any offense that leads to your license being revoked, you must take a new driving license test before you can get your license back.

Renew your drivers license

Your drivers license should be renewed every 10 years. It should also be renewed if it has been destroyed, lost or if any information in it has been changed, for example if you have changed your name or if you have been given new categories or lost categories.

In order for your drivers license to be renewed in Sweden, you normally have to be a permanent resident here. You can also renew your drivers license at the end of the validity period if you have studied in Sweden for at least six months.

Renewal is automatic

When your driver's license is to be renewed, the Swedish Transport Agency automatically sends out an application form for a new driver's license (basic document) to your civil registry address.

The renewal means that together with your application you must submit a new photo and make a new signature.

Driver's license revocation

If you are guilty of certain crimes or there is another reason (for example illness), the Swedish Transport Agency can revoke your driver's license. You can also have your driver's license permit, tractor license and driver's license revoked.

Driving license suspension period

If your driver's license is revoked, a suspension period is determined on your driver's license. The suspension period is the time that your driver's license must be revoked. The time starts to apply from the day the police took possession of your driver's license. The time is given in months from 1 to 36 months. How long you will be without a driver's license

depends on the traffic offence, your need for a driver's license and how you have previously behaved in traffic.

If the suspension period exceeds 12 months, a new driver's license is required to drive again.

Driving license permit

To practice driving and taking driver tests, a driving license permit is required.

When applying for a driver's license, the Swedish Transport Agency verifies that you meet the requirements set. It does not cost to apply for a driver's license. You must attach an eye exam. From 1 February 2025, only optometrists and doctors may issue such certificates of eye examination (previously some driving schools could also issue these).

You should visit the Swedish Transport Agency to get the most up-to-date information on what applies.

A driving license permit is valid for five years.

Revoked permit

A driving license permit can be revoked

- if your personal conditions change, for example that you get an illness or are considered unreliable in terms of sobriety due to an offense,
- if you, when practice driving, intentionally commit a serious violation, for example, driving against a red light.

However, the private supervisor/driving instructor is always legally responsible.

E-identification

If you apply via the Swedish Transport Agency's e-service, an e-identification is required.

Certificate of vision

Certificate of vision is a certificate of vision examination that is required for the Swedish Transport Agency to be able to issue a driver's license. The form can be ordered by the Swedish Transport Agency and carried out by an optician or a doctor.

Private driving practice

If you have the opportunity, it is a great advantage if you can practice driving privately as a supplement to the training you do at a driving school. How much private driving practice

you do, you decide for yourself based on your circumstances. You can practice driving in a car from the time you are 16 years old.

With a learners permit and supervisor permit in place, the following applies when doing private driving practice:

- There should sit a green sign with white lettering "driving practice" (ÖVNINGSKÖR) on the car.
- Your private supervisor should be authorized to practice driving with you.
- Your private supervisor is responsible for the driving and should sit next to you.
- You may bring passengers in the car. Note, however, the priority, practice driving in the first place and giving people a lift is second.
- If you want to practice driving with a light truck or a light trailer, you must be 17 years and 6 months.
- You may practice driving with both an automatic transmission and a manually shifted car if you do not have a condition on your driving license that you may only drive an automatic transmission car.
- You can practice driving without completing an introductory training if you already have a driving license B with conditions for an automatic transmission car and intend to lift the condition for an automatic transmission car.

In addition to the requirements, you should consider the following:

- Your private supervisor should have a mirror to look backward.
- Your private supervisor has a hard time stopping the car. On some older cars, there is a parking brake between the seats that can be used, but the braking effect from this is very poor

Panic situations while practicing driving

Virtually all driving gives a certain risk. When practicing driving, panic situations (hazardous situations) may occur which the driver cannot handle, where the supervisor or the traffic instructor must take over in order to avoid accident.

For example:

- The student intends to drive out on a country road and miss an oncoming car - what can the supervisor do? Will the parking brake help?

- The student drives out and gets a motor stop in the middle of an intersection with oncoming traffic at high speed. How can this be prevented? Should you have taken another route or maybe waited until it was completely free?

Take on a habit of going through what should be done each time you are out practicing driving and talk about the risk situations that may arise. Choose exercise areas according to level of skill and knowledge.

Find educators

If you are going to practice driving or attend an introductory training at a traffic school, you can find an educator via the Swedish Transport Agency.

Pregnant and children

You can practice driving when you are pregnant. Always use the seat belt, it is safest for both the mother and the baby in the womb.

Remember that the belt is pulled over the sternum and below the stomach, down towards the thighs.

If possible, avoid driving at the end of pregnancy. The steering wheel and airbag can hurt the baby if an accident occurs. There are special belts for pregnant women but they do not increase safety, they are only for comfort.

Introduction Course

Supervisors for private practice driving for a category B license must have undergone an introductory course before they can be approved as supervisors.

As a student, you must have gone through a valid introductory course, if you want to partake in private practice driving for category B. You must have completed the course in order for the supervisor to have their application processed by the Swedish Transport Agency.

You, as a student, must be at least 15 years and 9 months old in order to attend the education. You may partake in private practice driving with a passenger car from the age of 16.

The introductory course should contain three parts:

- Driver license education goals, content and rules for driving practice
- how to plan and structure your driving practice
- important factors for road safety.

The introductory course should also include theoretical elements on the environment and Eco-driving.

Supervisor permit

All private driving lessons require that driving takes place under the private supervision of a person that the Transport Agency has approved as a private supervisor. It is the private supervisor who is responsible and is regarded as the driver in all private driving lessons. A student can have several private supervisors. For the Transport Agency to approve a private supervisor, he/she shall

- be at least 24 years
- have a valid driving license issued by an EEA State, for the vehicle that is used in the private driving lessons, and have had this for a total of at least five of the last ten years
- have passed an introductory course, during the last five years, if the private driving lessons are for category B.

Please note that students must have a valid driving permit for the application to be processed.

A private supervisor may have several students. The supervisor must apply to be approved for each student but only needs to attend one course. A supervisor can have a maximum of 5 students at the same time.

E-identification

If you apply via the Swedish Transport Agency's e-service, an e-identification is required.

What do you need to know about the car you drive?

The vast majority of cars have a similar placement of blinkers, pedals, and more. This is to make it easier for you as a driver when, for example, you rent or borrow another car.

But there are differences and it is essential that you get to know the car you will be driving. It doesn't take many minutes but can be decisive if something unexpected happens.

On this page, you will get basic tips on what you should think about. In Know your vehicle you will get more details about the car's construction.

Steering wheel and seat

Start by setting up the chair. You should sit relaxed while reaching all controls. The chair should be adjusted correctly, you should not lie down. This means that you can see the road in front of you well while you have no problems steering the car.

The head restraint should be adjusted so that it protects your head, at eye level and close to your head. This reduces the risk of a whiplash injury if you are hit from behind.

In order for the belt to function optimally and protect you from being thrown forward in a collision, the belt must fit correctly and not be twisted or worn across the stomach. It should sit over the shoulder and hip.

When you drive, you must hold the steering wheel "quarter to three", then you have good conditions to be able to control the car and cope with an accident in the best way. In addition, you avoid getting your arms between you and the airbag if the car's airbag deploys in a collision.

Whiplash is an injury to the neck. You can get this kind of damage, for example, when you get hit from behind by another car and your head is thrown forward and backward.

You can help prevent whiplash by having the headrest high and as close to the head as possible.

You should always check the rear view mirror when braking, to get an idea of how they react behind you. If you have time to see that you are about to get hit, you should push yourself against the backrest and headrest.

Shift and pedals

Before driving, you need to know how the pedals work and how to shift gears.

Manual shift

A manual transmission car has three pedals:

On the left is the clutch pedal.

In the middle is the brake pedal.

On the right is the gas pedal.

You accelerate and brake with your right foot. You use your left foot for the clutch pedal when shifting.

Automatic transmission

An automatic car has two pedals:

On the left (perceived as the middle) is the brake pedal.

On the right is the gas pedal.

Automatic electric cars

Some electric cars can be driven by using only the gas pedal; it works on the principle that when you let off the gas, the car brakes. It is essential that you test this so as not to be surprised.

Never brake with your left foot in an automatic car!

If you've never driven a car with an automatic transmission before, it's tempting to start braking with your left foot. Don't do this! The reason is simply a safety issue as it can confuse the brain if you have to make a quick emergency stop.

Rear view mirrors

All cars have rear view mirrors*. Often one internal and two external. You should learn to use them. It is as important that you are aware of what is happening behind the car as in front of the car. Many accidents happen because one does "not look out". Consider the blind spot that is next to the car on its left and right side.

Adjust the mirrors

Be sure to set the mirrors correctly and do this before you drive off.

Caravan

When driving with a caravan that is wider than your car, you need to supplement your car with extra mirrors that make you look outside the caravans sides. There are special mirrors for this purpose.

* Rear view mirrors

There are cars that instead of a rear view mirror have a camera on the outside and a monitor inside the car and you must then know how these are set up and work

Turn signal

When turning at an intersection or changing lanes, use your turn signals to inform others of your intentions. Blinkers are also called direction indicators.

When you practice driving and your instructor or traffic teacher asks you to turn, they often say "signal" when you should blink.

Find out where the turn signal lever is located and how it works when, for example, you change lanes. In the vast majority of cars, the turn signals turn off by themselves, but this can vary.

Hazard warning Lights

When you use the hazard lights you turn on the cars turn signals simultaneously. Consult the cars owners manual on how to do this.

You may use the hazard lights when towing or when the car, due to accident, engine failure or the like, is at a stand still and might be an obstacle or danger to other traffic.

If you are towing someone, the one you are towing may use hazard lights.

Parking brake

The parking brake is usually operated by hand and is intended to be tightened when parking the car to ensure that it does not move.

There are different types of parking brakes:

- You pull a lever, often sitting between the front seats of the car but can also sit between the driver's seat and the driver's door.
- You step on a pedal when you have parked.
- You press a button after parking.
- The parking brake is activated automatically when you stop and put the gear in neutral/parking mode.

The function of the parking brake is to *prevent* a car from moving

If you can access the parking brake from the passenger seat, be aware that it is not effective as an emergency brake during practice driving. The parking brake usually affects two wheels, usually the rear wheels. This means that it is basically impossible to stop quickly as this is not the purpose of the parking brake.

Dual control

Training cars at a traffic school always have a double command where the teacher has full access to the vehicles foot brake via a special pedal.

Accident prevention system

Vehicles are equipped with different types of systems that are intended to help avoid accidents and reduce the effects of an accident.

Driver support

A driver assistance system is meant to help you in various situations. Some are tied to lights on the dashboard; if they are not active light will come on as they are considered so crucial to your safety.

Below are some examples:

- Blind spot warning. Helps you detect vehicles behind and to the side of your own car to avoid collisions when changing lanes. This function can be seen as an orange marking in the side mirror and sometimes also an audio signal inside the car.
- Adaptive cruise control with distance warning. Alerts you if you drive too close to the vehicle in front to avoid overtaking accidents. This function can brake the car automatically to maintain the correct distance. When the speed ahead increases again, your car automatically increases speed again.
- Lane assist. Reduces the risk of you unintentionally leaving your lane when driving primarily on country roads and motorways. This function steers actively and you can then experience it as if the steering wheel is "steering itself".
- Traffic sign information. Can help you not to exceed the maximum speed limit by displaying the sign on the dashboard. Some cars also change the speed automatically.

Crash protection

The design car's interior and exterior are designed so that you and other road users are not injured in an accident.

Other examples:

- Seat belts.
- Belt tensioner.
- Neck protection, whiplash protection.

- Airbags, the most common form is mounted on the steering wheel in front of you, but there are also side-mounted airbags.

Child safety

To protect the very smallest, you can use baby seats and for the slightly bigger ones, there are child car seats. As a driver, you are responsible for the children in the car you are driving.

Dashboard

At the beginning of the training you need to have knowledge about the cars dashboard. This is usually behind the wheel. The most important thing for you to know is that there should not be any orange or red light. If so, then something is wrong and you should not drive away until you straighten out why the light is lit. The red lights warn of things that require immediate action. Use the car's instruction manual.

The dashboard also usually contains speed information and indicator lights for flashers.

On some cars, the dashboard is replaced by a monitor, like a tablet, where you can use your finger to get different types of information about the car.

Owners manual

When you rent or borrow a vehicle and there is something you can't find or if a light comes on that you don't understand, you should use the car's owner's manual.

If it is your own car, you should also read this important book to learn what unique features your car has, as well as when the car should be serviced and more.

Content

Here you can find information about controls, warning lights, and more. Here are instructions on how to carry out various maintenance.

Some other examples of what you can find information about:

- how to change light bulbs,
- which oil to use if you have an internal combustion engine,
- what air pressure should you have in the tires,
- how to change a tire if you get a flat tire when you are out and about,
- where the battery and fuses are.

Find out where the owner's manual is. If you need to do something on the go, it's not so fun to discover that you're missing the instruction manual.

Please visit the manufacturer's website. There can often be good explanations and videos on practical things that are good to know.
